Klass

Glass handling automation machinery

Description

The Klass system (Sorting System) uses an automatic process for glass handling and storage, also integrating the various processing lines with the downstream production phases. The system's modular design meets the specific needs of each plant, managing and organizing the flow of glass. The system is equipped with Kerasoft, a dedicated and customized production application capable of optimizing the process according to the production program, the automatic loading of tempering furnace and more.

As a result of a constant R&D investments, Klass improves operational efficiency, guarantees plant stability, production flexibility and continuity; it manages space rationally, reduces manual operations, giving the finished product superior quality levels.
